Message

Dr. Nao Suzuki

Dr. Nalini Mahajan

Dear Friends and Colleagues,

Fertility Preservation is now widely accepted as 'Standard of Care' for patients at risk of reduced fertility resulting from cytotoxic drugs, genetic predisposition and age. It is also being considered for some benign but progressive gynaecological conditions. Appropriate patient selection for fertility preservation, management of cancer,

and careful follow-up within a multidisciplinary setting is critical. To this end we have invited doyens in the field of fertility preservation to share their knowledge and expertise through hands on workshops, case discussions and didactic lectures. This meeting will provide a platform for Oncologists, ART specialists and Gynaecologists to exchange information and treatment strategies. We welcome young investigators looking to share their research. Please mark your calendar for this exciting event! We look forward to welcoming you in New Delhi.

RAPID-i VITRIFICATION SYSTEM

For time-efficient, easy and successful vitrification.

NEW!

The method, media, device and accessories have all you need to simplify your workflow – from dehydration and storage to warming.

A smoother workflow

- Rapid-i device supports an aseptic workflow and is known for its ease of use.
- SmartBox keeps you well organised and safe. It increases working comfort and reduces the risk of unintentional warming.
- Ready-to-use media for all cell stages is developed for time-efficient, easy and successful vitrification and warming. Both vitrification and warming are performed at 37°C, to maintain spindle integrity and ensure maximum viability.
